Log2Box

Compatible with DATAcentre

- Automatic filing of incoming calls

- Redistribution of emails to multiple recipients

- Automatic notification of edits and annotations

- Intuitive storage structure

- Online annotation of docs

Log2Box, The easiest way to file your DATAcentre reports

Log2Box is an online storage facility for any device that can send out reports or alarm messages by email. With its focus on data security and revision control, Log2Box is the perfect companion for your DATAcentre.

As a standalone alarm and monitoring system, your DATAcentre already allows real-time and historical data to be viewed both graphically and as a tabular report. With emailed daily reports and alarm messages, you have a quick and easy to use system for recording data from a variety of sensors.

How does it work?

Simply define some storage cabinets in Log2Box and tell it which DATAcentres are going to be using the system. Once you've added Log2Box as one of the email recipients in the DATAcentre, everything is ready to go. Now all of your reports are securely filed and safe from unauthorised manipulation.

But Log2Box, doesn't stop there. If you want to add notes to the records – perhaps you need to explain that dip in the temperature when the freezer was being serviced – then Log2Box provides you with an online editor for adding your own notes. With a sophisticated revision system, all changes can be tracked and all earlier versions of any documents are always available for review. Meeting your regulatory requirements has never been easier.

So why do you need anything else?

Although emails provide a simple means for receiving daily reports and alarm messages, you still need to file those documents, and this filing needs to meet your regulatory requirements. If you merely keep the documents in your in-box, can you be sure that they will be there in five years time? Does your IT department enforce a maximum email retention period? Are attachments automatically removed after a predefined period? Are you sure you will be able to find them later? If you need to comply with 21 CFR Part 11, can you show that the documents have not been tampered with? Can you add notes and comments to show that you have addressed any adverse events or artefacts in the data?

This is where Log2Box steps in. Keeping with the philosophy that storing your data should require the minimum amount of effort on your part, Log2Box handles the filing and data retention for you. The program ensures that regulatory compliance is something that happens automatically in the background rather than becoming yet another task to add to your daily workload.
